

AMENDMENTS TO THE SPECIFICATION

In the Specification

Please replace the last paragraph on page 23 of the specification, which starts with the text “The content reception system 850 receives an identical copy of the manifest 855 ...”, with the following amended paragraph::

The content reception system 850 receives an identical copy of the manifest 855 and a flawed non-identical copy of the content 860 in which a content portion 2 820 is absent as indicated by missing content 865. The reception system 850 contains reception verification logic 870 to detect missing content 865, record the missing content 865 in a [[journal 875]] missing log 875, and provide an indication that content portion 2 820 is missing.
